

Custom Tools

For SolidWorks®

Managing your SolidWorks data
in a unique way

CustomTools for SolidWorks®

Optimize your product designs and data management by using CustomTools.

CustomTools is a totally integrated solution for SolidWorks. It includes numerous features that optimize the use and management of data for SolidWorks, which make easier and faster for the users to complete their design.

7 reasons to choose CustomTools

- Automatic files naming and saving
- Batch printing and file conversion
- Copying assemblies
- Dictionaries to translate drawings
- Save time and money by eliminating daily routines
- 40% of SolidWorks's Finnish users have chosen CustomTools.
- Fast learning curve

CustomTools is a SolidWorks® Gold Partner product. As defined by SolidWorks themselves: *"Certified Gold Products provide the power you need to finish the job right. SolidWorks Gold Products offer the best-in-class integrated solutions to help you get your products to market faster."*

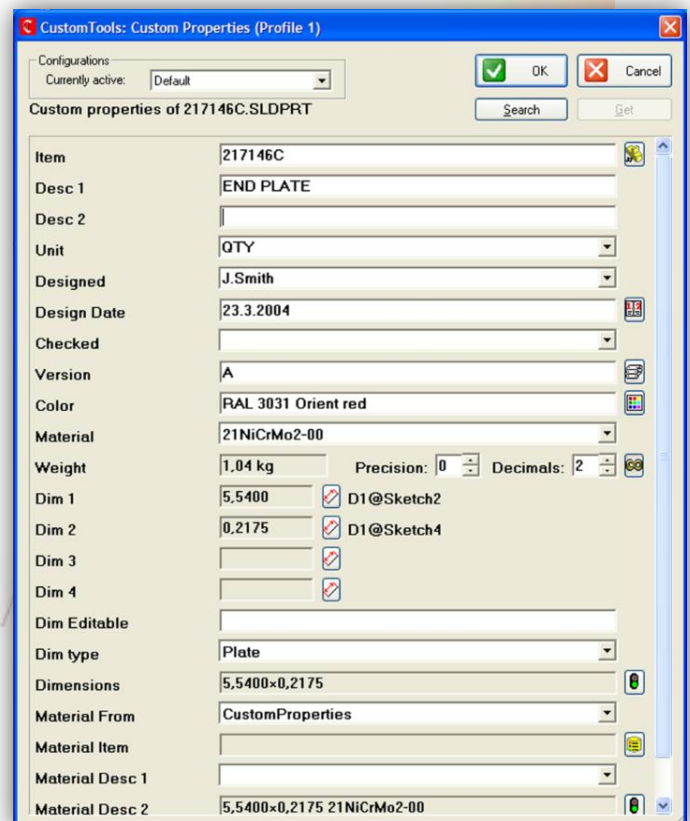

It contains many time-saving tools that automate daily routines, such as automatic file naming, batch printing, custom properties and so on... CustomTools also allows the users to connect SolidWorks to a corporate ERP or MRP system, where item data can be retrieved to SolidWorks models and assembly structures can be export.

Custom Data Management

CustomTools is an engineering tool made to bring more clarity and flexibility to data management. With CustomTools, users manage the attribute information of planning documents in a unique way. All the custom properties of the attributes fields can be freely determinate with a user friendly and trouble-free interface. It has also controlled of all the settings that have been made for the operation of your company. All the settings are stored in the profile file. Changes made to the profile file are automatically updated to the users without delays. Users can link the dimensions directly from 3D model to be used in different combination fields, for example in the billing materials. Data are managed in a much more efficient way, which eliminates a lot of data processing requirements.

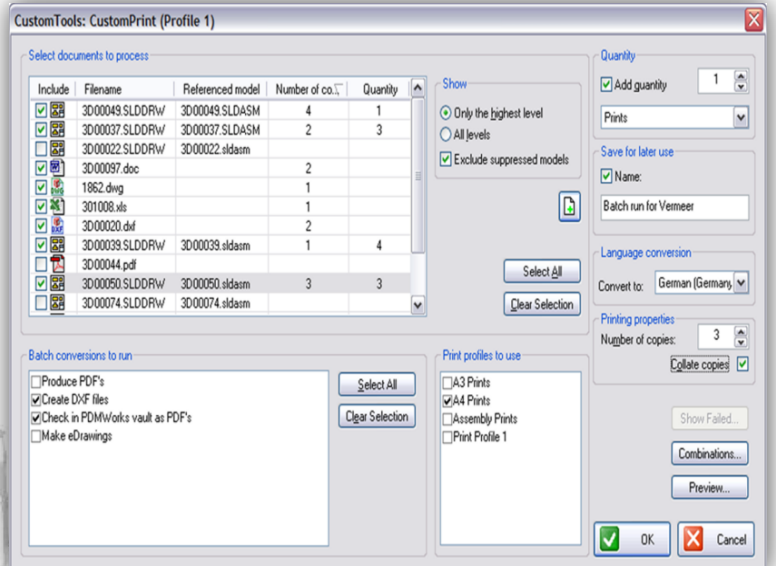

Item and documents codes are automatically generated by Cu

Configure specific custom properties, through a friendly interface.

Batch Printing and Conversions

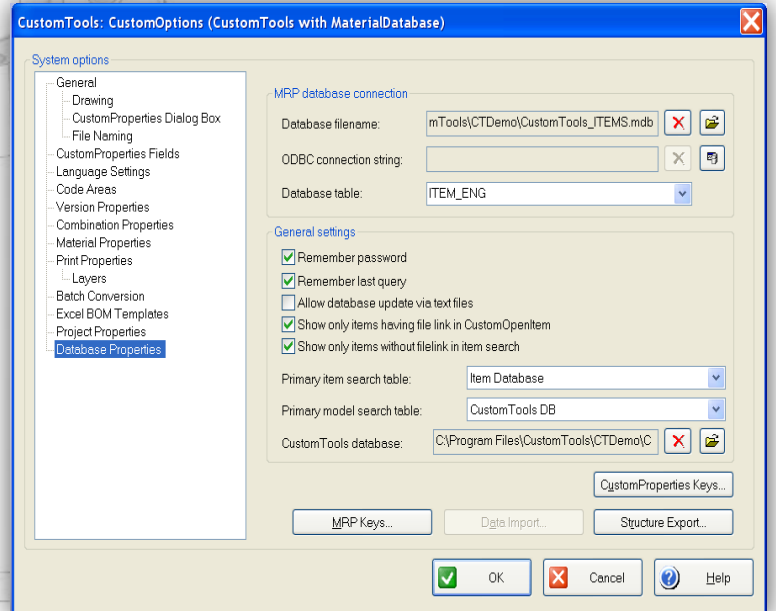

The whole printing process can be managed through an easy to use interface. By using CustomTools, the users do not have to open every single drawing and set the correct printer settings before being able to print. Define different printers' settings for assemblies, parts and drawing templates: in that way documents are always printed to the desired printers and correct paper size. Print and convert to DWG, PDF and PDF formats by a couple mouse clicks. CustomTools is able to translate drawings into specific languages.

By a couple of clicks: print your drawing in the preferred language

Interfaces Between Separate Systems

With CustomTools you can connect SolidWorks to a corporate ERP or MPR system allowing the users to import item data to SolidWorks models and export assembly structures. Content of each attribute field can be imported from any given database through ODBC interface. It is now possible to search item information for modeled components directly from material planning system. CustomTools optimizes different data management system, such as PDM Works®. Use the advanced data search options to be directly connected from PDM vault. Conversion files can be automatically checked in to any PDM system.

Export files from SolidWorks assembly structure for ERP and MPR systems

Company

CustomTools has been developed by ATR Soft Ltd; a company specialized in customer oriented customization of CAD and PDM systems. Our business idea is to create solutions that provide more value and capabilities to our customers' production and business activity.

Our mission is to join our knowledge, competences and experience together, in order to keep innovation as a key driver of our activity.

Our goal is not only to try to answer customers' needs; our goal is to exceed their expectations in what we provide. Our expertise has also been recognized by SolidWorks Corporation, and as a testify, ATR Soft has committed several software development projects for SolidWorks related to PDMWorks® Enterprise SolidWorks integration.

As a contractor, ATR Soft has delivered solid software engineering services. They have proven to have in-depth SolidWorks and PDM knowledge"

Kenneth Hallberg, Vice President, PDM Products, SolidWorks Nordic AB
