SolidWorks Designer 3

The SolidWorks Designer 3 is a medium to high specification workstation optimised for use with SolidWorks.

There are four major factors that affect performance with 3D design applications: CPU clock speed, Graphics Card performance, RAM Speed and RAM quantity. These have been carefully balanced to provide the optimum operating environment for 3D designers looking for lots of capability without going all out for the most expensive model.

The SolidWorks Designer 3 is part of a range of 4 computers each designed to fit your working requirements and budget. Designed for SolidWorks. Designed For You.

Specification:

- Intel E8600 3.33GHz Dual Core Processor
- 2 x 2GB DDR3 1333 RAM (Up to 8GB)
